Mobile Templates

OutSystems Themes

- Define the look and feel of your application Screens
- A Theme can be applied to:
 - A module
 - A UI Flow
- Each module has a default Theme
 - Screens are created based on that theme by default

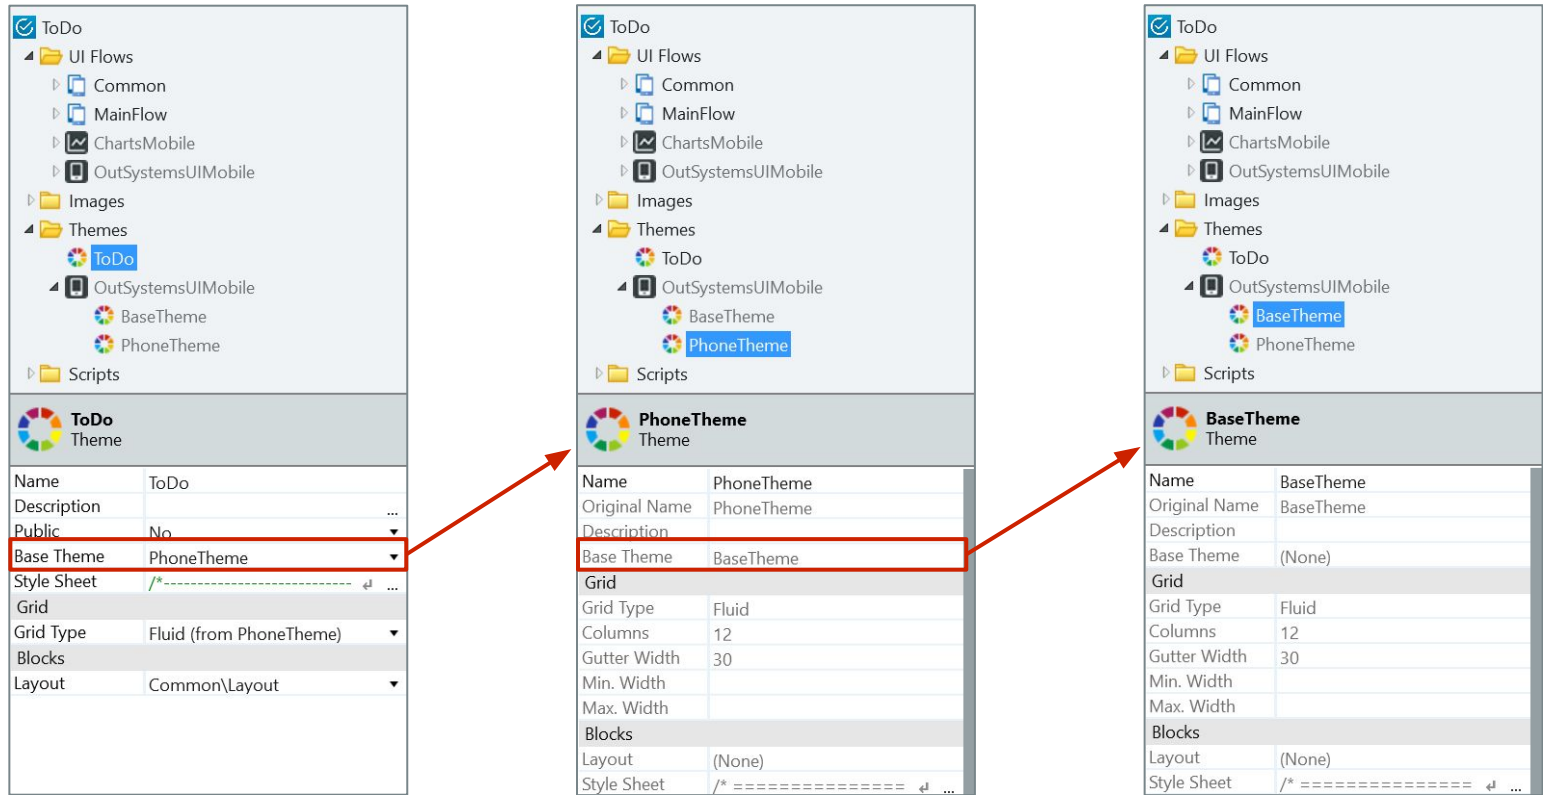

Theme Definition

- Themes define common styling properties for UI elements
 - Extension of the Base Theme
 - Can override styles from the Base Theme
 - Common Layout Block
 - Grid Type: Fixed, Fluid or None
- A Theme can be defined in any module (including *Blank*)
 - Can be shared between modules
 - Modules can have multiple themes for different UI Flows

The screenshot displays the OutSystems IDE interface. At the top, there are tabs for 'Processes', 'Interface', 'Logic', and 'Data'. The 'Interface' tab is active, showing a tree view of the application structure. Under the 'ToDo' module, there are folders for 'UI Flows', 'Images', 'Themes', and 'Scripts'. The 'Themes' folder is expanded, showing the 'ToDo' theme. Below the tree view, the 'ToDo Theme' configuration is displayed in a table-like format.

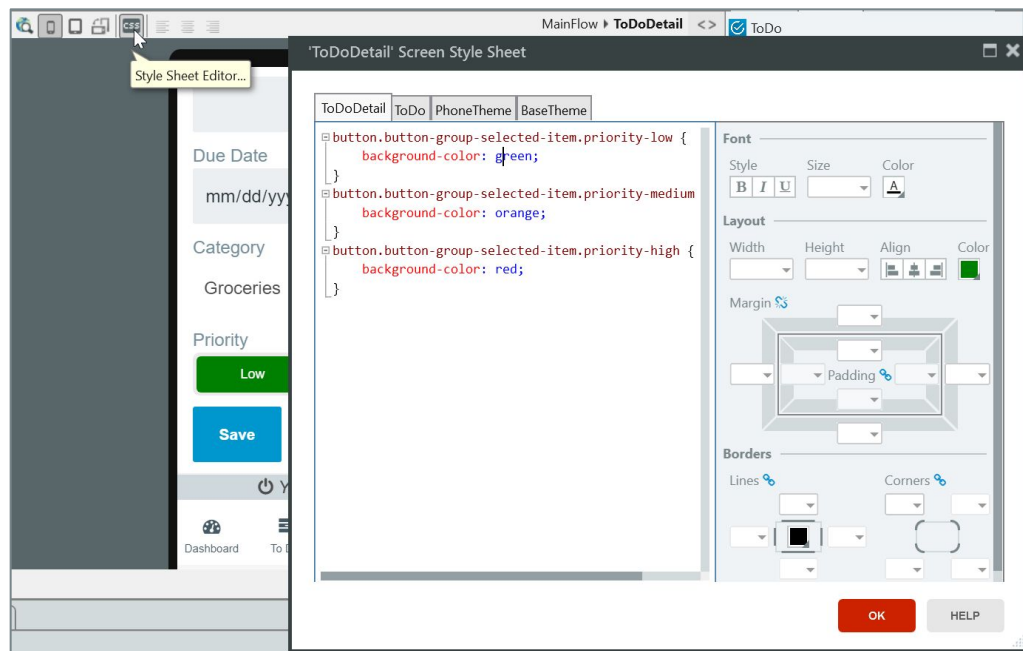

ToDo Theme	
Name	ToDo
Description	
Public	No
Base Theme	PhoneTheme
Style Sheet	/*----->
Grid	
Grid Type	Fluid (from PhoneTheme)
Blocks	
Layout	Common\Layout

Themes Cascade

Style Sheets

- Allow defining CSS Style Classes in a module with visual elements
 - Themes
 - Screens
 - Blocks
- Service Studio provides a Style Sheet Editor with:
 - Syntax highlight
 - Auto-complete
 - Visual styles editor

Customizing CSS

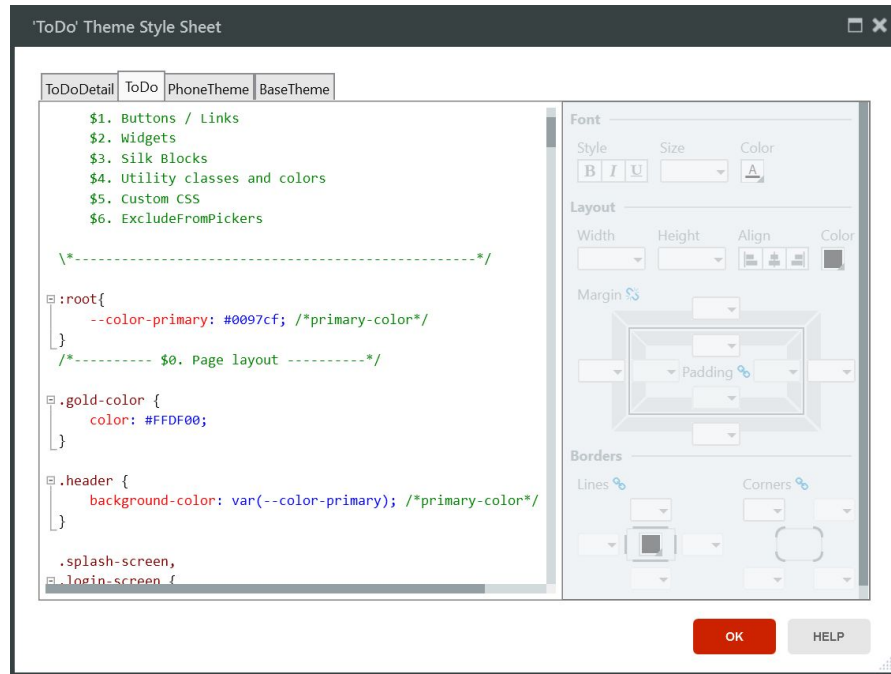

Possible to customize existing CSS Classes

- Except for the Base Theme

Changes are immediately visible in Service Studio

CSS Variables can be used to accelerate customization

- Define a variable and its value
- Use the variable
- Replacing the value affects all usages of the variable

Style Sheet Order

- Style Sheets are loaded in the following order in Screens
- Style Classes can be overridden

1. Blocks

StylesBlock Block	
Name	StylesBlock
Description	...
Public	No
Icon	Default Icon
Events	
On Initialize	
On Ready	
On Render	
On Parameters...	
On Destroy	
Advanced	
Style Sheet	.TestClass { background-color: green; }
Required Scripts	
Add Required Script	

2. Theme

StyleTheme Theme	
Name	StyleTheme
Description	...
Public	No
Base Theme	PhoneTheme
Style Sheet	.TestClass { background-color: yellow; }
Grid	
Grid Type	Fluid (from PhoneTheme)
Blocks	
Layout	Common\Layout

3. Screens

StyleScreen Screen	
Name	StyleScreen
Description	...
Title	
Roles	
Anonymous	<input checked="" type="checkbox"/>
Registered	<input checked="" type="checkbox"/>
Events	
On Initialize	
On Ready	
On Render	
On Destroy	
Advanced	
Style Sheet	.TestClass { background-color: red; }
Required Scripts	
Add Required Script	

```
.TestClass {           Styles.MainFlow...YU+ORQnb9GEQ:1
  background-color: ■ red;
}

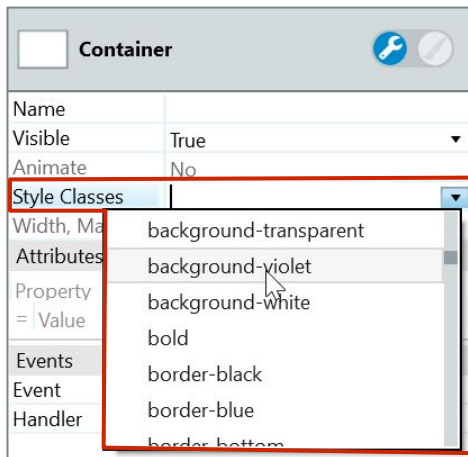

.TestClass {           Styles.StyleTh...j8Khn18ye40A:1
  background-color: ■ yellow;
}

.TestClass {           Styles.MainFlow...qCY1s961YX9A:1
  background-color: ■ green;
}
```

Applying Styles

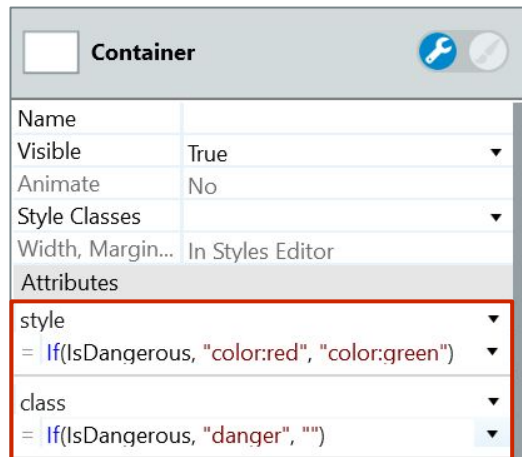

Styles Property

Select existing style classes

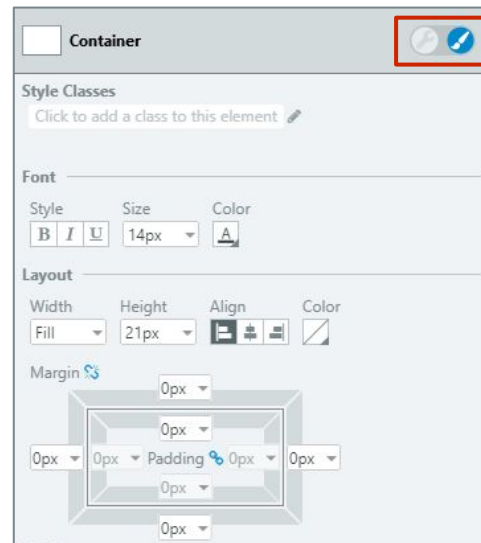

Extended Properties

Define inline HTML styles or classes based on runtime conditions

Styles Editor

Visual CSS editor
Allows promoting to style classes

Summary
